RS232 Communications port.

Press and hold down **POWER ON** Button

MENU SETUP MODE (TWIN MODE)

PM1200 CALIBRATION (TWIN)

For articulated vehicles using fifth wheel cells, plus an air sensor on trailer. Usually non-tipping.

TO SET TWIN

- 1 Ensure trailer is unloaded.
- 2 Turn display on with **ON / OFF** button
- 3 Wait for display to go through start up procedure and settle on **NET/GROSS/LOAD** etc.
- 4 Press & hold **ON/OFF** button & hold until **MODE SELECT** is displayed then release button.
- 5 Press **CHANNEL** button repeatedly until **TWIN** is shown.
- 6 Press **ENTER** button once save the selection.
- 7 Split-weight the vehicle on a flat, non ramped weighbridge. To do this put tractor only (with trailer connected) on weighbridge and record weight. Pull forward until whole vehicle on weighbridge and record weight. Take the tractor weight from the whole vehicle weight, this will give you the weight of the trailer. These two weights will be used for tare weights, (tare weight 1 - tractor, tare weight 2 - trailer).
- 8 Press **MODE** button repeatedly until **SET ZERO** is displayed.
- 9 Press **CHANNEL** button repeatedly until **ZERO ALL** is displayed.
- 10 Press **ENTER** button once until to confirm zero.
- 11 Press **MODE** button repeatedly until **SET TARE** is displayed.
- 12 Press **CHANNEL** button to select **TARE 1**, now press **PRINT** button to start cursor flashing. To edit this figure to match the reading just taken for **TARE 1** use the **PRINT** button to move the cursor along, and the **MODE** and **CHANNEL** buttons to change the number. Once the figure is obtained press the **ENTER** button to stop the cursor and save the reading.
- 13 Press the **CHANNEL** button again to select **TARE 2** and repeat the previous process to enter the figure for **TARE 2**.
- 14 Load the vehicle to full capacity and split weigh the vehicle again as before. Note the weights.
- 15 Take the **TARE1** weight from the tractor weight when fully loaded to give you the **NET WEIGHT** for channel 1, (Cal weight 1).
- 16 Take the **TARE2** weight from the tractor weight when fully loaded to give you the **NET WEIGHT** for channel 2, (Cal weight 2).
- 17 With the weights calculated, press the **MODE** button while in Setup, to scroll to **SET SPAN**.
- 18 Use the **CHANNEL** button to scroll to **CAL WT 1** and enter the **NET** weight for **CAL WT 1**. When done press the **ENTER** button twice to save.
- 19 Use the **CHANNEL** button to scroll to **CAL WT 2** and follow the previous procedure to enter the **CAL WT 2** figure.
- 20 Press the **MODE** button to scroll to **DONE?**, and press the **ENTER** button to exit Setup.

PM1200 CALIBRATION (SINGLE)

TO SET ZERO

- 4 When display shows **MODE SEL** press the **MODE** button once until display shows **SET ZERO**
- 5 Press the **CHANNEL** button until display shows **ZERO 1** then press the **ENTER** button to start the zero.
- 6 The display will show **WAIT** then show **ZERO OK**
- 7 Press the **MODE** button until display shows **DONE** then press the **ENTER** button to exit.

TO SET SPAN (NET)

- 1 Load the vehicle with a full known load as close as to the vehicles **MAX** payload weight as is possible.
- 2 Lift the body of the trailer so that it is about 8" off the chassis (*Tipper Vehicles Only*).
- 3 Switch the display on & wait until the display shows **NET**
- 4 Press & HOLD DOWN the **POWER** button until the display shows **SETUP**
- 5 When the display shows **MODE SEL** press the **MODE** button until the display shows **SET SPAN**
- 6 Press the **CHANNEL** button once to select **CAL WEIGHT 1** & then press the **PRINT** button to start the cursor flashing.
- 7 To change figures:
 - MODE** button - changes figures (1-2-3)
 - CHANNEL** button - changes figures (3-2-1)
 - PRINT** button - Moves cursor to next figure
- 8 Once you have the **NET** weight on the display Press **ENTER**.
- 9 The cursor will stop flashing, then press the **ENTER** button to confirm the calibration, then the display will show **WAIT** then **CAL O.K.**
- 10 Press the **MODE** button until display shows **DONE** then press the **ENTER** button to exit set-up.

NOTE: For **TWIN**, press **CHANNEL** button to display **CAL Wt 2'** and repeat steps 6-8
